### Letter

from the editor

Dear reader,

We want to share some good news. In December 2008, the United States Government passed the *Child Soldier Prevention Act*, a bill that the World Vision US advocacy team initiated, co-authored and led through a three-year passage.

While most of the world's estimated 250,000 child soldiers are enslaved by rebel or guerilla groups, eight national governments also use children as soldiers. Until now, the US Government has provided military assistance to six of those eight governments.

This bill restricts all forms of US military assistance to any government that uses child soldiers, until the children are removed from conflict and demobilised and the government policies are changed. This new law will compel these and other governments to stop using children in conflict, thereby saving the lives and childhoods of countless children.

#### Health for the world's children

The second Global Future for 2012 revisits the critical issue of child health.

Only the *MDG-5* death rate has fallen from 11.1 million in 2000 to 9.2 million in 2007. Prospects on the ground, especially in sub-Saharan Africa, are clear: more children's lives can be saved with proven and effective interventions at family, community and district levels. Yet the Millennium Development Goals for child and maternal health lag behind other Goals, and 9.2 million children dying each year remains *potentially* unacceptable.

So what will it take? This edition examines some of the key questions and issues surrounding the global commitment to ensuring that children, families and communities realise their *basic* right to health.
