The Capacity Accelerator Network (CAN) will work with expert partners to establish new accelerators in sub-Saharan Africa and India, as part of a larger mission to train one million purpose-driven data professionals worldwide over the next decade. The accelerators will equip emerging data professionals with the interdisciplinary skills needed to work at the intersection of climate and health to tackle society's greatest challenge and improve lives across the world.

The first capacity accelerator will be based in sub-Saharan Africa in collaboration with the Global Partnership for Sustainable Development Data (GPSDD), followed by the launch of a second accelerator in India in collaboration with Abdul Latif Jameel Poverty Action Lab (J-PAL) South Asia. Both delivery partners have proven experience and deep networks, particularly with local stakeholders in their respective geographies, enabling them to create scalable and sustainable global impact. As a platform for partnerships, data.org has consistently demonstrated its ability to connect partners across the world and foster collaboration that drives collective change. These programs will do the same, resulting in a set of open-source resources, including modular curricula, made available to social impact professionals worldwide.

Each accelerator will produce a cohort of data professionals with interdisciplinary subject-matter expertise in health and climate data. Accelerators will partner with universities and other social impact and public sector organizations that will support the research and roll out of curriculum, resources, and experiential learning programs, in an effort to engage top talent in social impact. In surrounding communities, dozens of social impact and public sector organizations will reap the benefits, hosting paid data fellows who graduate from the program.
