Overview 1

## 1 Sustaining Natural Assets and Reducing Human Vulnerability 21

Agro-climatic conditions are highly correlated with poverty and vulnerability 23

Shocks to natural assets speed transitions into poverty 26

Physical ecology exacerbates the burden of disease 27

Population pressure is increasing 27

The demographic transition is stalled 28

Land degradation is accelerating, with dire consequences for food security 29

Deforestation threatens livelihoods 32

Despite low greenhouse gas emissions, the threat of climate change looms 33

Africa's rich biodiversity faces threats 35

Water resources are inadequate... 36

...and their quantity and quality are suffering 38

Urban sprawl continues unabated, increasing vulnerability 40

The way forward—better data and new technology for agriculture and health 44

Note 44

References 44

## 2 Tracking Progress towards Sustainable Development 49

Sustainable development—meeting the needs of future generations 51

Three dimensions of sustainability 52

Overall sustainability—a mixed history 53

Economic sustainability—initial gains lost 61

Environmental sustainability—a slight recovery since the mid-1990s 64

Institutional sustainability—good progress over time 65

Accelerating the transition to sustainability 68

Annex 2.1 The indices of sustainability 68

Annex 2.2 Note on methodology 71

Annex 2.3 Rankings of 38 African countries by overall, economic, environmental, and institutional sustainability index scores, 1975–84, 1985–94, and 1995–2000 73

Notes 77

<b>3</b>	<b>Realizing the Promise of Green Biotechnology for the Poor</b>	<b>79</b>
	Reducing poverty and hunger requires agricultural modernization	82
	From the green revolution to the gene revolution	87
	Modern biotechnology offers vast opportunities	90
	Like any scientific discovery, biotechnology also poses risks	100
	Strategic interventions required to make biotechnology pro-poor	106
	Conclusion	118
	Annex 3.1 Current efforts in plant biotechnology in selected African countries	119
	Notes	122
	References	123
<b>4</b>	<b>Tackling the Diseases of Poverty through Red Biotechnology</b>	<b>127</b>
	Reversal of health gains	129
	Emerging innovations in red biotechnology	132
	HIV/AIDS	135
	Tuberculosis	144
	Malaria	147
	Challenges in the application of biotechnology	150
	Benefiting from red biotechnology—policy recommendations	153
	Conclusion	162
	References	162

## Boxes

1.1	Southern Africa's food security crisis—and its links to drought and disease	28
1.2	Cyclones and storms increase vulnerability	35
1.3	Threats to biodiversity in the Zambezi Basin	37
1.4	The most serious threats to Africa's frontier forests	38
1.5	Rainwater harvesting: standing the test of droughts	39
1.6	The Nile Basin Initiative: regional cooperation on renewable resources	42
1.7	Pollution in Cairo and Lagos—Africa's megacities	43
2.1	Economic and environmental sustainability—conflicting or compatible?	54
2.2	What the indices show	55
2.3	Overall sustainability—declining in Nigeria, improving in Ghana	57
2.4	Economic sustainability—stagnating in Uganda, deteriorating in Kenya	62
2.5	Institutional sustainability—down sharply in Gambia, up dramatically in Benin	66
3.1	A wide array of “biotechnologies”	82
3.2	Banana tissue culture—pro-poor crop biotechnology	90
3.3	Egypt—working to ensure food security through genetic engineering plant research	91
3.4	South Africa—leading the continent in adopting genetically modified crops	92
3.5	Kenya—producing its first “home grown” genetically modified sweet potato	93
3.6	Maximizing the benefits of biotechnology through rural development interventions	94
3.7	New rice for Africa	96

3.8	Fact and fiction in the biotechnology debate in South Africa	101
4.1	Demographic impact of HIV/AIDS on Africa	137
4.2	HIV life cycle	139
4.3	Microbicides—empowering women to protect themselves	141
4.4	Approaches to HIV vaccines under development in 2001	142
4.5	Clinical trials for the first HIV candidate vaccines for Africa	144
4.6	African leaders' response to HIV/AIDS	154
4.7	New Partnership for Africa's Development—setting goals for health	155
4.8	Falling prices for antiretroviral drugs	157
4.9	Access to treatment for all—the Brazilian experience	160
4.10	Global initiatives to fight the diseases of poverty	161

## Figures

1.1	Poverty in Burkina Faso by region, 1994	23
1.2	Poverty in Ethiopia by region, 1999/2000	25
1.3	Poverty in Mozambique by province, 1996/97	25
1.4	Shocks to rural households in Ethiopia, 1980–2000	27
1.5	Africa's main international river basins	41
2.1	Overall sustainability index scores by country, 1975–2000	58
2.2	Economic sustainability index scores by country, 1975–2000	63
2.3	Environmental sustainability index scores by country, 1975–2000	65
2.4	Institutional sustainability index scores by country, 1975–2000	67
3.1	Global area of genetically modified crops, 1995–2000	88
3.2	Biopolicy goals: reinforcing links between technology development and rural welfare	109
4.1	Life expectancy with and without HIV/AIDS in some of the hardest hit countries in Sub-Saharan Africa, 1990–2015	131
4.2	Burden of malaria by region and age group, 1998	148

## Maps

1.1	Africa's vulnerability to climate change	34
1.2	Projected water scarcity and water stress in Africa, 2025	40
3.1	Status of biosafety in Africa, 2000	117
4.1	Estimated adult HIV infection rates in Sub-Saharan Africa, end of 2001	136
4.2	Estimated incidence of tuberculosis in Africa, 2001	145

## Tables

1.1	Poverty in Ghana by agro-climatic region, 1998/99	24
1.2	Burdens of disease from major environmental risks	29
1.3	Populations living on fragile lands by region, 2000	30
1.4	Types of soil degradation by region, 1991	32
2.1	Overall sustainability clusters for 38 African countries, 1975–2000	56
2.2	Economic sustainability clusters for 38 African countries, 1975–2000	61
2.3	Environmental sustainability clusters for 38 African countries, 1975–2000	64

2.4	Institutional sustainability clusters for 38 African countries, 1975–2000	66
A2.1	Rank correlation matrix—alternative measures of sustainability	68
A2.2	Goodness of fit statistics	72
3.1	Incidence of chronic undernourishment in developing regions, 1979–81, 1990–92, and 2010	84
3.2	Indicators of food availability and hunger in selected African countries, 1998	85
3.3	Performance of agriculture in developing regions, selected years, 1986–2001	86
3.4	National legislation and grass-roots initiatives on biodiversity and resource sharing in selected African countries	105
3.5	A framework for weighing the adoption of biotechnology by African countries	108
3.6	Agricultural biotechnology research personnel in selected developing countries, various years	112
3.7	Expenditures on agricultural biotechnology research in selected developing countries, various years	114
4.1	Mortality and life expectancy trends in Sub-Saharan Africa, 1960–99	130
4.2	Distribution of deaths from HIV/AIDS-related causes, malaria, and tuberculosis by region, 2000	130

## Data notes

Tonnes means metric tons.

Two years separated by a dash (2000–01) indicate a range of calendar years, while two years separated by a slash (2000/01) indicate a fiscal year or, in the context of agriculture, an agricultural year.

Dollar figures are in current U.S. dollars unless otherwise specified. Billion means 1,000 million.
