

JUST TRANSITION, RESPONSE MEASURES AND INTERNATIONAL COOPERATION

AFRICAN FOCUSED - GST 1 OUTCOMES ANALYSIS

GST OUTCOMES

ANALYSIS OF KEY CONCEPTS

- **Equity and Support Principles:** Reaffirms equity, CBDR-RC, implications for SD & poverty eradication and need for enhanced support
- **Transition away from fossil fuels** in Just, orderly & equitable – differentiated emissions reductions pathways, stranding assets \$1.4 trillion in Africa by 2050 & SD, risk for fossil fuel export and producing countries in respect of foreign exchange earnings and fiscal space
- **Tripling Renewable Energy and Low Emission Technologies** - early capital investment, energy access, integration in value chains, industrialization, critical minerals, trade rules-CBAM, jobs and livelihoods,
- **Transition to climate resilient economies** -International nature/GGA, funding gap, Temperature goal and their implication on the costs of adaptation and L&D, erosion of development gains.
- **Financing the transition:** quantum vis as needs, quantity of finance and technology access barriers
- **International Cooperation Gaps:** unfair international cooperation ecosystem that doesn't reflect continental needs or agency. Trade, finance, and technology system reforms are essential for equitable transitions.

METHODOLOGICAL FRAMEWORK FOR NDC PREPARATION

1. **National context assessment**—development priorities, importance of adaptation and resilience , emissions profiles, base commitments
2. **Evaluate policy space and trade offs** - socio-economic implications of transition pathways- differentiated energy transitions, co-benefits – Jobs, food, energy access, local manufacturing, risks/just transitions principles,
3. **Align with international cooperation** – identify accessible international support/conditions, leverage regional initiatives, anchor regional strategies
4. **Stakeholders' inputs** – national, sub-national and local actors
5. **Assess implementation readiness** – institutional capacities, policy & regulatory frameworks – implementation readiness roadmap
6. **Monitoring & Transparency:** track distributional impacts and co-benefits through MRV systems.

KEY MESSAGES

- **Context-Specific NDC Development;** climate resilience and low-emission pathways with socio-economic development
- **Enhance Adaptation** and Loss and Damage Implementation
- **Differentiated Energy Transition pathways** providing policy space and support sustainable development.
- **Expand renewable energy infrastructure** and develop local manufacturing to harness Africa's clean technology potential.
- **scaled up means of Implementation, Fair international finance**

Roles of Regional Organizations; Supporting African countries with analytical tools, information, technology, capacity building and resource mobilization, connected African advocacy
