

DivAirCity

DivAirCity “*recognizes, accepts and celebrates differences*” (Audre Lorde) in cities and turns them into a true asset and actor of changes to tackle the emergency of **air pollution and climate change** challenges through a set of NBS interventions for innovative, sustainable, healthy and robust urban areas.

This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No. 101003799

Call for DivAirCity Twinning Partners

InAfrika, as project partners for the H2020 funded project, [DivAirCity](#), are conducting a community outreach survey to learn about air pollution and decarbonization challenges in Africa and gauge the community's interest in becoming a twinning partner of the project.

As a twinning partner, your city or project will be able to engage in information exchanges with and gain technical expertise from members of the consortium and/or gain membership in DivAirCity spinoff initiatives and networks, to sustainably adapt and replicate the project activities within your local context.

Areas of expertise among the consortium include:

Payment for ecosystem services;

Pan-European Contest;

Air quality sensor testing and development with citizen participation;

Co-creation frameworks to implement nature based solutions on a city level.

To register your interest, complete the survey here: <https://forms.gle/AvdGScSAVR8hw97SA>

For more information on the program, see [here](#), alternatively please contact: a.u.jarrett@inafrika.co
