Report on the Implementation of Regional and International Agendas and other Special Initiatives in the Sub region

ECA Subregional Office for Southern Africa
Introduction

• This year’s report addresses the progress towards Sustainable Development Goals and Agenda 2063 goals particularly pertinent for the theme:
  • *Greening Industrialization in Southern Africa through digitalization, infrastructure development and regional integration: leveraging AfCFTA implementation*

• 11 out of 17 SDGs analysed

• The paper cross references progress towards the Agenda 2063 goals
Outline of the presentation

Core SDGs for green industrialization

Selected outcome related SDGs

Cross-cutting SDGs

Enablers

Conclusion and recommendations
SDG Index: overall score

- Between 2000 and 2018, the Southern African region progressed by 5 points on the SDG Index score
- Since 2020 progress has stagnated, and in some cases reversals were registered (mainly due to COVID-19)
Progress towards Agenda 2063

• The overall score of the Southern African region for Agenda 2063 Indicators stood at 50% in 2022
• This corresponds to the even split between goals for which at least 50% of attainment was recorded as compared to those on which less than 50% of progress was attained (see below)

<table>

Core SDGs and Agenda 2063 goals for green industrialization

Core SDGs for green industrialization
• SDG 9
• SDG 7
• SDG 13
• SDG 12

Related Agenda 2063 goals
• Goal no. 2
• Goal no. 4
• Goal no. 6
• Goal no. 7
• Goal no. 10
SDG 9 – industry, innovation and infrastructure

- SDG 9 is the core objective for the green industrialization agenda
- Industry implements the green agenda; innovation fuels technology adoption; infrastructure enables rollout of new solutions and facilitates trade
SDG 9 – industry, innovation and infrastructure

- R&D spending – very low across the region
- Technology and innovation are key enablers for green industrialization

<table>

</tbody>
</table>
SDG 13 – Climate Action

• Southern African region is increasingly often hit by adverse impact of climate change

• Climate-related disasters are the most common reason for internal displacement in the Southern African region

• Given the impact is disproportionately affecting the region, it should be at the forefront of the greening drive

• Countries worst hit: Mozambique and Malawi

Internally displaced persons, new displacement associated with disasters by country

SDG 7 – Ensure access to affordable, reliable, sustainable, and modern energy for all

- Affordable and clean energy access is closely interlinked with the green industrialization agenda
- The proportion of population with access to electricity is increasing steadily across the region; rural areas are lagging behind
- Mauritius, South Africa and Eswatini among the best performers
SDG 12 – Responsible consumption and production

- Material footprint is the quantity of material extraction that is required to meet the consumption of a country.
- The declining trend signifies a gradual decoupling of economic growth and environmental degradation; a positive trend that should be encouraged in the drive towards green industrialization.

![Graph showing domestic material consumption per capita](image-url)
Agenda 2063 – key goals for the greening industrialization agenda

(2) Well Educated Citizens and Skills revolution underpinned by Science, Technology and Innovation
(6) Blue/ocean economy for accelerated economic growth
(7) Environmentally sustainable and climate resilient economies and communities
(10) World Class Infrastructure crisscrosses Africa

(4) Transformed Economies

Over 50% attainment

Under 50% attainment
Selected key outcomes

Key outcomes
• SDG 1
• SDG 8
• SDG 10
Economic growth leading to poverty and inequality reduction

• Unemployment rate remains high; the GDP growth rate is rebounding slowly

• Gains in poverty and inequality reduction are evaporating due to the impact of COVID-19

• Attainment of Agenda 2063 Goal (1) A High Standard of Living, Quality of Life and Well Being for All Citizens at meagre 17%

• Increased sense of urgency for the region to find new sources of growth – green industrialisation to be considered
Cross cutting goals

Cross cutting goals:
- SDG 4
- SDG 5
SDG 4 – Quality education

• Educated workforce is a key prerequisite for green industrialization

• Completion rates have been growing across all levels of education

• Unfortunately, only around 30% of population completed upper secondary education in 2020
SDG 5 – Gender equality

- Women in political leadership create powerful role models and take decisions which represent broader parts of the population.
- Evidence has shown that women bring in additional value in aspects such as social and economic development; consumption patterns; access and use of knowledge; approach to environmental issues; ecological footprints; and management of the environment.
Agenda 2063 and cross cutting goals

• All three relevant goals above 50% attainment:
• (2) Well Educated Citizens and Skills revolution underpinned by Science, Technology and Innovation
• (17) Full Gender Equality in All Spheres of Life
• (18) Engaged and Empowered Youth and Children
Key enablers

Key enablers:
• SDG 16
• SDG 17
SDG 17 – partnerships for the goals: Finance

• Sustainable financing is crucial for safeguarding progress towards SDG implementation and green industrialization

• Positive trend is observed in total government revenue and Foreign Direct Investment

• But: growing debt imposes a burden to national economies
SDG 17 – partnerships for the goals: Trade

- Exports from the Southern African region have recently overtaken imports;
- Trade and green industrialization are mutually reinforcing: trade openness can allow countries to supply clean energy, source technology and take advantage of trade agreements favoring sustainable production.
SDG 16 – peace, justice, and strong institutions

- Sound institutional framework is a key prerequisite for economic growth and green industrialization
- The only countries that exhibited good quality institutions recently were Mauritius, Botswana, Namibia and South Africa

Institutional Quality Score Liniowa (Institutional Quality Score)

Conclusions and recommendations

- Progress towards the SDGs has been stifled by the COVID-19 crisis coupled with the impacts of the Russia-Ukraine war
- The region has progressed on some of the key aspects, notably education completion rates, electricity access and government revenues
- The falling manufacturing value added across the region is a major concern. Countries should implement policies that promote green industrialization.
- Investments in research and development are essential to help countries advance into more advanced activities.
- The region should tap the opportunities of the green industrialization agenda, such as supply of green energy; green investments; technology spillovers from key partners in energy transition; etc.
Conclusions and recommendations

• More attention should be paid to secondary and higher levels of education.
• The region should continue to support women empowerment and the involvement of women in politics
• The countries of the region need to strengthen domestic resource mobilization efforts in order to ensure sustainable financing
• Further trade liberalization across the region (AfCFTA, RECs FTA) could help strengthen regional value chains
• The region needs to continue to undertake capacity building efforts to strengthen its institutions.
Thank you for your attention
