What are SDG Acceleration Actions?

The Political Declaration of the 2019 SDG Summit stresses the urgent need for concerted, accelerated action by all stakeholders at all levels to achieve the 2030 Agenda for Sustainable Development. In the lead up to the SDG Summit, UN DESA set up an online platform to capture new and ambitious SDG Acceleration Actions.

(<https://sdgs.un.org/partnerships/action-networks/acceleration-actions>)

SDG Acceleration Actions are initiatives voluntarily undertaken to accelerate the SDG implementation by governments and all stakeholders – individually or in partnership. Any new or upgraded action that builds on existing efforts aimed to achieve the SDGs or addressing the interlinked nature of the 2030 Agenda could be considered as an SDG Acceleration Action.

Registered actions will be highlighted at the High-level Political Forum on Sustainable Development (HLPF) and other key global meetings, including the annual ECOSOC Partnership Forum, and through UNDESA's Acceleration Action platform and social media channels.

Current Profile of SDG Acceleration Actions

Study on SDG Accelerators: Observations and Insights from SDG Acceleration Actions Platform

Introduction

The concept of “accelerators” for Sustainable Development Goals (SDGs) is inherently “context-specific”. What seems to accelerate the sustainable development for some countries can require expensive trade-offs in others. Similar accelerators may result in different outcomes depending on the timing and circumstances of intervention as well.

Policy-makers may define unique sets of national SDG accelerators in their distinctive development ecosystems through inclusive consultation processes. While some countries may start with identifying the bottlenecks that slow down the progress towards the achievement of national priorities, others can focus on promising areas for multiplier impacts in support of sustainable development¹. Recent research underlines the paramount importance of basing such efforts on their own existing national development strategy, SDG country report and other vision documents of the country and of fully taking into account the needs of those left behind.²

Moreover, the [2019 Global Sustainable Development Report](#) (GSDR)³, taking a systemic approach on SDGs, shows where and how rapid, transformational change would be possible to achieve the SDGs. The report introduced four powerful change agents called “levers” – namely, *governance*; *economy and finance*; *individual and collective action*; and *science and technology* – which accommodate the multiple, complementary roles that individual actors and entities play in bringing about changes⁴. One of the key takeaways of the 2019 GSDR is that the acceleration of the SDGs comes from the novel combinations of different levers and the innovative collaboration of actors therein⁵.

Building on such findings of the 2019 GSDR, the current study intends to scan and detect some of the common “SDG accelerators” observed from the policies, programmes and initiatives published on the SDG Acceleration Actions website, DESA’s premier knowledge space to capture new, ambitious SDG-responsive actions⁶. This study views the each identified “SDG accelerator” as a combination of well deployed, interfacing “levers”, conceptualized in the 2019 GSDR.

The purpose of this analysis is to support governments and stakeholders to sharpen their SDG

¹ For instance, the Growth Identification and Facilitation Framework (GIFF) determines the areas which a country should specialize based on its comparative strengths, rather than weaknesses. This method is often applied to least developed countries (LDCs).

² UNDP (2017). SDG Accelerator and Bottleneck Assessment. New York. For more information, see: <https://www.undp.org/publications/sdg-accelerator-and-bottleneck-assessment>

³ Independent Group of Scientists appointed by the Secretary-General, Global Sustainable Development Report 2019: The Future is Now – Science for Achieving Sustainable Development, (United Nations, New York, 2019).

⁴ The upcoming 2023 GSDR will introduce an additional lever, “capacities”, which has been already taken into account in the present study in its analyses.

⁵ Ibid.

⁶ The Political Declaration of the 2019 SDG Summit stresses the urgent need for concerted, accelerated action by all stakeholders at all levels to achieve the 2030 Agenda for Sustainable Development. In the lead up to the 2019 SDG Summit, UN DESA set up an online platform to capture new and ambitious SDG Acceleration Actions. For more information, please visit: <https://sdgs.un.org/partnerships/action-networks/acceleration-actions>

accelerating strategies and to inform the upcoming 2023 GSDR and the 2023 SDG Summit of actionable insights in comparable policy contexts where appropriate. The study is based on purposive samples available on the platform, rather than to launch large-scale trend analyses for statistically meaningful inferences.

SDG accelerators – common features from SDG Acceleration Actions

Based on a mapping exercise⁷ of a total of 350 SDG acceleration actions on the platform, as of June 2022, the following nine attributes are most frequently seen throughout all SDG acceleration actions:

- Deliberate, **integrated policy actions** to leverage inter-linkages among SDGs (77%)
- Actions taking a joined-up, **multi-stakeholder approach** (55%)
- Actions for **leaving no one behind** (48%)
- Actions for **boosting institutional capacities** (35%)
- Actions to link input / participation mechanisms **from local to global** (30%)
- Actions charged by **strong political commitment** (21%)
- Actions for **awareness-raising** through creative strategies (17%)
- Actions to use **monitoring & evaluation as a tool** for SDG mainstreaming (13%)
- Actions based on **indigenous solutions** (7%)
- Others (5%)

Figure 1. SDG accelerators commonly observed from platform

⁷ Multi-label classification method was used to assign more than one SDG accelerators to classify respective SDG acceleration actions whenever applicable.

Accelerator 1: Deliberate, Integrated Policy Actions to Leverage Inter-Linkages Among SDGs

Relevant GSDR Levers^[8]: Governance; Economy and Finance; Individual and Collective Action; Capacities

A number of governments and stakeholders are spearheading a wide array of reforms with a view to strengthening country ownership and a whole-of-a-society approach to address the complex, interlinked development challenges facing today. A number of such efforts focus specifically on enhancing capacities for integrated development planning, including through employing new policy frameworks.

77% of policies and initiatives the SDG Acceleration Actions platform have published aim to address multiple SDGs leveraging interlinkages. Such efforts are concentrated in Europe, Africa and North America, mainly initiated by civil society (30%) and national government (29.3%). In terms of income status, these policies are more often developed by high income (51.1%) and middle-income (41.5%) countries than by low-income countries (7%). Countries in special situations, including LDCs (8%), LLDCs (7%) and SIDS (1%), show a limited number of policies targeting interlinkages.

This may suggest the pressing need of developing country governments and stakeholders to strengthen capacities for making integrated policies including through technical assistance programmes. Development partners can support developing countries to enhance policy coherence among different development agendas and activities for sustainable development, promoting synergistic investment and cooperation.

Photo by Green Quarter

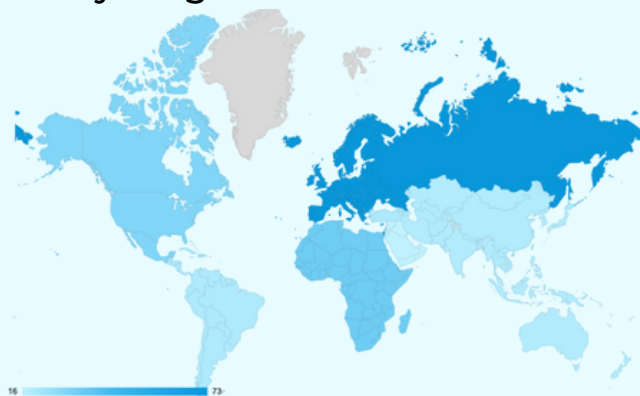

Accelerator 2: Actions taking effective joined-up, multi-stakeholder approach

Relevant GSDR Levers: Individual and Collective Action; Capacities

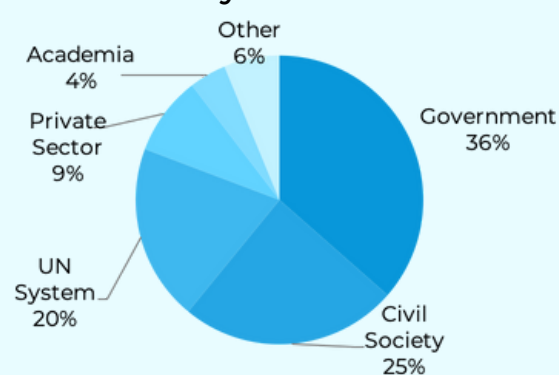

Multi-stakeholder partnership is considered a powerful mechanism to achieve synergistic changes, as it can bring together a wide range of actors across sectors and enable the optimal use of resources. According to recent research^[10], the world has been witnessing a growing number of multi-stakeholder partnerships forming up lately, both in scope and scale, in support of sustainable recovery and development. The results of a recent DESA survey^[11] shows that effective multi-stakeholder partnerships in post-COVID19 contexts have already proven to contribute to enhancing the expertise and knowledge base (72% of respondents); engaging marginalized groups (57% of respondents); and providing finance and access to services (44% of respondents).

55% of actions on the platform are mobilizing multi-stakeholder partnerships to implement their set objectives. Such partnerships were initiated mostly by governments (36.5%) and civil society (24.5%) in Europe, Africa and North America regions, predominantly in high-income (56.3%) and middle-income (36.5%) countries. Limited numbers of multi-stakeholder partnerships were mobilized for SDG acceleration actions in LDCs (8%), LLDCs (7%) and SIDS (1%). This again signify the capacity gaps for fostering and mobilizing multi-stakeholder partnerships in countries with special concerns.

Accelerator 3: Actions to leave no one behind

Relevant GSDR Levers: Governance; Economy and Finance; Individual and Collective Action; Science and Technology; Capacities

The imperative for inclusion and universality is at the core of the 2030 Agenda, with its bold pledge to leave no one behind. Inclusive sustainable development strategies and business models are in great demand to level up the societies and to unleash the potential of vulnerable groups to contribute towards sustainable development.

48% of actions on the platform are targeting vulnerable groups that are left behind in various contexts as both beneficiaries and change agents. These actions are mostly concentrated in Europe, Africa and North America regions, led by civil society (38.7%) followed by governments (29.2%). The largest country group stepping up actions for the cause of leaving no one behind among platform actions are middle-income countries (45.8%), followed by high-income (44.6%) and low-income (9.5%) countries. Despite the special needs and disadvantaged situations, LDCs (11%), LLDCs (9%) are undertaking vigorous actions for the cause, while few such examples were found amongst SIDS (1%). Although the current brief is not intended to serve as a trend study based on the large size of samples, further empirical study on the possible contributing factors causing middle-income countries to host a large number of actions for leaving no one behind would be value-added.

Photo by Let There Be Light International

Accelerator 4: Actions to boost institutional capacities

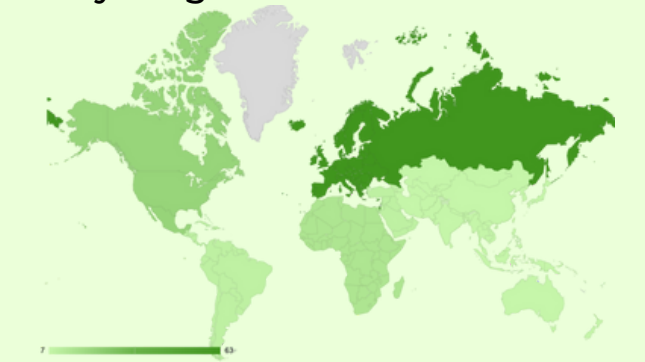

Relevant GSDR Levers^[12]: Governance; Economy and Finance; Individual and Collective Action; Science and Technology; Capacities

Capable institutions are at the heart of accelerating the planning, implementation and follow-up of national sustainable development priorities. Building institutional capacities linked cohesively to broader reform processes is a long-term process requiring adaptations to local conditions and behavioral changes over the course of time. UNDP's empirical evidence suggests that institutional arrangement represents one of the four most frequently encountered capacity issues^[13] across a variety of sectors and themes.

35% of actions on the platform are working towards enhancing institutional capacities, typically focusing on strengthening technical and human resource capacities and enhancing alignment and coherence across the different line ministries, institutions and functions. Most platform actions geared toward institutional capacity building are concentrated in Europe, North America and Africa, the majority of which are led by governments (65.9%) followed by the UN system (29.3%). A large number of such efforts are undertaken by high-income (55.3%) and middle-income (39.8%) countries, whereas a very limited number of low-income countries (4.9%) submitted such actions to the platform. The actions published on the platform for institutional capacity-building in the context of the LDCs (7%), LLDCs (7%) and SIDS (1%) also constitute a relatively small proportion.

This demonstrates the inherent paradox that the developing countries in greatest needs often have the least capacities and resources to address them, which underlines the important roles of development cooperation including South-South and triangular cooperation.

Photo by Peru 2030 Social Media

Accelerator 5: Actions to link participation / input mechanism from local to global

Relevant GSDR Levers: Governance; Individual and Collective Action; Capacities

The 2019 Global Sustainable Development Report (GSDR)^[14] notes the critical importance of involving grassroots actors in processes towards inclusive, transformative governance. Institutionalizing the input or participation mechanism at local or national levels is important, yet linking them to inform the global processes is paramount for facilitating more demand-driven, people-centered sustainable development.

30% of actions on the SDG Acceleration Actions platform are attempting to create such “from local to global” mechanisms designed for more inclusive, traceable participation systems to co-define the problems and co-design the solutions. Considerable numbers of such efforts are taking place in Europe, Africa and Latin America and the Caribbean, primarily led by governments (29.5%), civil society (26.7%) and the UN system (21%). The countries with high-incomes (55.2%) and middle-incomes (41%) host the majority of such actions, in comparison with low-income countries (3.8%). The actions from countries in special need, including LDCs (5%), LLDCs (3%) and SIDS (1%), remain minimal.

There is an urgent need to boost the participation and voice of developing countries and countries in disadvantaged situations throughout global decision-making processes to ensure that international-agreed development goals (IADGs) are implementable in all countries and to prevent further aggravations of asymmetric power.

Photo by Youth Climate Council Social Media

Accelerator 6: Actions charged by strong political commitment

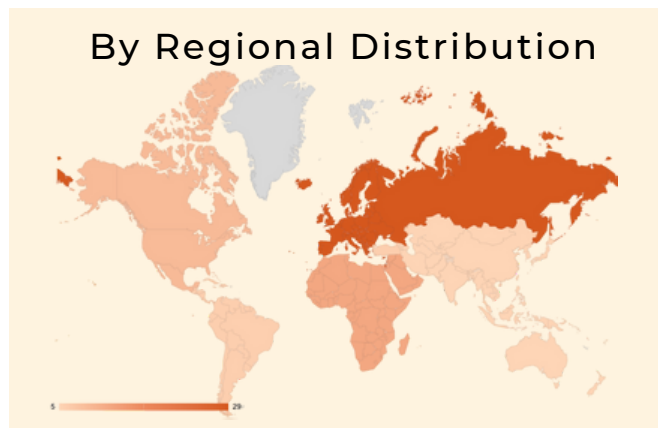

Relevant GSDR Levers: Governance; Individual and Collective Action; Capacities

According to the 2019 GSDR, the six strategic entry points^[15], in which focused, collaborative action by various stakeholders can accelerate progress towards the SDGs, always hinges on one determining factor – political commitment. 21% of SDG acceleration actions on the platform have been initiated by the highest level of the governments and institutions and involves multiple ministries or departments, with their explicit commitments often evidenced by large-scale financial investments.

Actions driven by high political commitment seem to be mostly initiated in Europe, West Asia and Africa. Such actions are predominantly led by governments (87.7%) followed by civil society (4.1%) and the UN system (4.1%), demonstrating the due consideration of the development effectiveness principles of country ownership and government leadership. Most platform actions backed by the highest level of leadership are undertaken in high-income (60.3%) and middle-income (34.2%) countries, rather than in low-income countries (5.5%). LDCs (7%), LLDCs (8%) and SIDS (1%) also constitute smaller groups among all politically-driven SDG acceleration actions on the platform.

The under-representation of countries with low-income status or special needs may be attributed to their low participation in the SDG Acceleration Actions platform and the consequent smaller size of samples. The possible correlation between the level of political commitment and the income status of countries, therefore, warrants future studies.

Photo by Government of Burundi

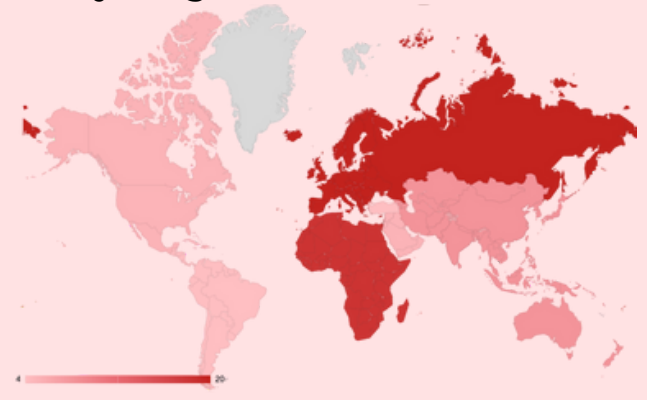

Accelerator 7: Actions to raise awareness through creative advocacy strategies

Relevant GSDR Levers: Individual and Collective Action; Capacities

17% of the actions on the SDG Acceleration Actions platform concern efforts for awareness-raising about sustainable development. They embed the SDGs in corporate strategies, school curricula and training certificates; organize promotional events and networked civic spaces; undertake full-fledged media campaigns; and perform other novel means of advocacy.

Most awareness-raising strategies showcased on the platform are based in Europe, Africa, North America and Asia & the Pacific. Such actions are led by civil society (55.9%), governments (16.9%) and the UN system (15.3%). Based on the available sample from platform actions, these efforts are most evident in high-income (45.8%) and middle-income (42.4%) countries, rather than in low-income countries (11.9%). While LDCs (15%), LLDCs (8%) and SIDS (3%) are more engaged in advocacy efforts compared to other SDG-accelerating actions, the lesser degree of participation in advocacy efforts for sustainable development in low-income and vulnerable countries may be attributed to a number of factors, including the lack of institutional capacities and financial resources.

By Regional Distribution

Accelerator 8: Actions to use monitoring & evaluation (M&E) as a tool for SDG mainstreaming

Relevant GSDR Levers: Governance; Economy and Finance; Individual and Collective Action; Science and Technology; Capacities

A growing number of governments and stakeholders are investing resources towards building more robust monitoring frameworks and data and statistical capacities as a smart way to mainstream the SDGs and to facilitate evidence-based policy-making. Imbedding the SDGs in the monitoring & evaluation (M&E) frameworks, however, requires careful considerations of national contexts and priorities, including through inclusive consultation and consensus-building processes. In the area of international cooperation, there is a pressing need for development partners to align their monitoring & evaluation frameworks with those of programme countries to ensure country-owned sustainable development while avoiding parallel structures.

13% of actions on the platform are employing such M&E strategies, most of which are based in Europe, Asia & the Pacific and North America – in high-income (56.5%), middle-income (39.1%) and lower-income (4.3%) countries. The M&E related actions from LDCs (9%), LLDCs (4%) and SIDS (2%) are minimal. SDG-related M&E efforts are mainly driven by the UN (37%), civil society (30.4%) and governments (15.2%); this signifies the pressing need to promote more ample policy space for governments, based on country-owned, nationally-and locally-driven sustainable development priorities, while the UN can continue to play a role of facilitator in creating enabling policy environments for sustainable development at all levels.

Accelerator 9: Actions based on indigenous solutions or culturally-competent approach

Relevant GSDR Levers: Economy and Finance; Individual and Collective Action; Science and Technology; Capacities

More tailored approaches to sustainable development are in great demand as countries navigate through different development stages with evolving priorities and vulnerabilities. It is vital for governments, stakeholders and development partners to identify and employ locally-relevant solutions and culturally-sensitive capacity-building modalities to advance sustainable development.

7% of SDG acceleration actions on the platform are based on indigenous solutions or a culturally-sensitive approach. They are mostly concentrated in Africa, Latin America and North America and led by civil society (39.1%), the UN system (26.1%) and governments (21.7%). It is noteworthy that middle-income countries (56.5%) host most indigenous- and culturally-competent actions, in comparison with high-income (21.7%) countries. The low-income countries (21.7%) and LDCs (26%) show more proportions for these actions, relative to other SGD-accelerating strategies identified in this brief, whereas LLDCs (13%) and SIDS (0%) present a limited number of indigenous solutions on the platform.

These analyses may indicate the potential for middle-income countries, including those dealing with middle-income trap, as well as low-income countries and countries in special needs to capitalize on culturally-relevant development strategies, including through South-South cooperation, since tailored approaches often make the smartest solutions.

3 THE CITY OF BOGOTÁ

committed to transforming the culture of care work, came up with a novel, culturally-competent approach, a “District Care System”. The strategy establishes ‘blocks of care’ designed to co-deliver care services engaging all family members of residents and in such a way that people will not need to walk long distances to access the service.

Source: <https://sdgs.un.org/partnerships/bogota-district-care-system>

Conclusion

The overall results of analyses point to the urgent need for the countries with low-income status and particular vulnerabilities to develop policy, institutional and financial capacities to identify their context-specific SDG accelerators and to lay out important frameworks and mechanisms in support of their own sustainable development.

The policy observations and considerations contained in this brief emerged from practical examples on the SDG Acceleration Actions platform. Further studies are welcome to build sufficient empirical bases on the positive correlations between the nine SDG accelerators identified in this brief and the accelerated rate of the implementation of the SDGs. More in-depth research will also be useful to examine the respective SDG accelerators in relation to various contexts in which they operate (e.g. geographical region, sector, income-status, special needs, etc.) and to attempt to answer the questions of how to optimize such SDG accelerators to first reach the countries and peoples farthest left behind.
