Strengthening women’s land tenure security crucial to eradicating poverty

My name is Amaelle Seigneret. I work as a Research and technical support consultant with IIED (the International Institute for Environment and Development), a research institute with a long history of collaboration with ECA and the African Land Policy Centre. In particular, Through various projects IIED has supported the implementation of the Framework and guidelines on land policy in Africa, and has contributed to the development of the Guiding Principles on Large Scale Land Based Investments in Africa. Working closely with partner organisations in Africa, we generate evidence, develop practical approaches such as legal empowerment tools, and formulate policy recommendations to make land governance structures more inclusive and just. This is what we are currently doing with our Cameroonian partners from the CED (Centre for Environment and Development), also present in Abidjan this week, and RELUFA (Anti-Hunger Network) through the LandCam project.

Cameroon has undertaken a land law reform for the first time since 1974. This decision comes at a time when African rural lands are under great pressure and in a national context where there are few mechanisms to protect the land rights of local populations. There are places in Cameroon where communities’ living spaces have been considerably reduced, or have even disappeared, because their lands have been allocated for commercial projects or conservation reserves without prior procedure to consult them and obtain their consent. LandCam aims to support civil society during the reform process to ensure that Cameroon’s rural populations are not only represented in decision-making structures, but to see that they can meaningfully participate and actively defend their interests.

“In can confidently state that women’s land tenure security is critical for their empowerment and for unlocking transformative social and economic benefits at the macro level in accordance with the AU Agenda 2063 and Agenda 2030 for the sustainable development goals.”

She spoke during a plenary session on Securing Land Tenure for Women and Other Marginalized Groups.

Ambassador Sacko said inheritance remained an essential method of land acquisition for women even though inheritance laws and customs often favoured men over women, the Commissioner said.

“Women are less likely to be allocated land through community distribution or inheritance due to norms related to ancestral lands, and statutory legal frameworks may also be discriminatory or

Land policy in Africa: Expert panel calls for “fair, efficient land management”

Experts attending this year’s conference on Land Policy in Africa have called for fair and efficient land management to support moves to transform the continent.

Each speaker shared their thoughts on the challenges facing the land sector and shared knowledge on the fair and efficient management of the natural resource in African states.

The panel comprised Angela Thoozile Didiiza, South African Minister of Agriculture and Agrarian Reform; Michael Lipton, Professor of Economics at the University of Sussex; Bitange Ndemo, Professor at the University of Nairobi; and Ali Mufurui, founder and CEO of Infotech Investment Group.

Angela Didiza said: “It is simply essential that women have access to land. Clear policies must be put in place to ensure implementation of recommendations for land management.” In his remarks, Professor Lipton called for “a democratic approach” to avoid arbitrariness in land management and also protect the interests of landowners.

Bitange Ndemo underscored the need to adopt appropriate technology choices for efficient land management. “We cannot make small farms productive. That is why we need to find ways of turning them into large farms. We must decentralize the land-management system and clearly define what we need over the next ten years; that is the right way to improve the system.”

Ali Mufurui said, “We have aggravated the system by issuing land titles. Giving someone a piece of land with a land title is not the way to solve the problem. The real issue is what use it is put to. Land has a lifespan and we need to work on using it well to provide the maximum benefit to the entire community. The most urgent need now is to rethink this way of managing the land issue.”

The key theme for this year’s dialogue is: “Winning the Fight against Corruption in the Land Sector: Sustainable Pathway for Africa’s Transformation”.

“The land already belongs to the women. We, as the traditional leaders, are there only to protect it for their use. Why should women - our mothers, sisters and daughters - ask for rights which are already theirs. We should invest in the women and support them so that they can support us in our duties to safeguard as custodians of the land for our people. Only then can we together and support Africa’s development,” said HRH Izakare.

Panelists agreed that conflicting and overlapping legal and regulatory frameworks and jurisdictions over land and resources were further excluding women and other vulnerable groups.

Corruption in land administration, they said, obstructed women’s access to land, markets and credit by imposing high informal or illegal costs for accessing land-related services. In extreme cases, corruption resulted in evictions. They emphasized the need for collective responsibility by governments and experts in accelerating the gender-responsive implementation of the AU agenda on land.
