

ACTIVITY SECTORS AND TECHNOLOGIES CONSIDERED AS CATALYSTS FOR THE GREEN ECONOMY

Based on the potentialities of the region, UNEP has identified ten special sectors to stimulate the green economy: agriculture, building, energy, fishing, forestry, manufacturing industry, tourism, transport, management of water and wastes.

The technologies needed to transition towards the green economy are numerous and varied. They apply to activity sectors that constitute the levers of the sub-region's economy. These include, inter alia, agriculture, energy, industry, exploitation of natural resources and of biofuels.
