

# AFRICAN MINING VISION

SERIES ON INDUSTRIALISATION FOR AN EMERGING AFRICA

## AFRICAN MINING VISION

The African mining vision seeks to have the mining sector contribute to broader economic and social development of the continent.

The Vision draws inspiration from initiatives launched at sub-regional, continental and international levels, namely: the Yaoundé Vision on artisanal and small-scale mining, the Charter on sustainable development and the mining policy framework of the mining partnership for Africa ; the SADC implementation framework and plan for harmonization of mining policies, standards, legal and regulatory frameworks, the common mining policy and the Community Mining Code of the West-African Economic and Monetary Union.

The Vision proceeds from the understanding that enterprises have an important role to play in the continent's social and economic development.
